HANDMADE MATTRESSES & SLEEP PRODUCTS

Caring for your mattress

Your new handmade Matt-Royal® mattress has been produced using natural materials of the finest quality, as well as the most contemporary technologies materials. Proper care is needed in order to get the best out of the mattress' features and to ensure a longer lifespan. Just follow these simple instructions for installing, transporting and maintaining your mattress to ensure maximum yield and a longer lifespan.

Transport & installation

6 simple tips

1

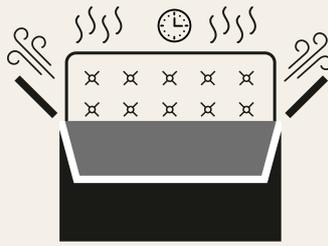

Be careful when transporting the mattress.

The mattress must always be transported in an upright position, and must always be protected so as to prevent it from getting dirty or damaged.

Do not fold the mattress when transporting it.

2

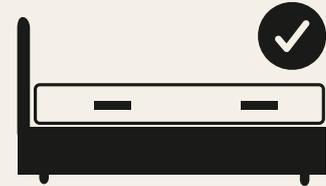

Let the mattress breathe.

Your mattress is delivered to you in a cardboard box and plastic package. Once you have removed the mattress from its packaging, it is best to leave it uncovered to air for a few hours before putting on the mattress protector and sheets.

3

FURTHER INFORMATION
at page 4 & 5.

The mattress must be placed on a new, stable base.

In order to achieve the best possible mattress support, place it on an anatomic bed frame on a Matt-Royal® bed or mattress base.

A worn base can cause permanent damage to the product, for which the company cannot be held liable.

4

Do not use the handles to lift the entire weight of the mattress.

The handles are intended to facilitate the light shifting of the product once it has already been placed on a bed.

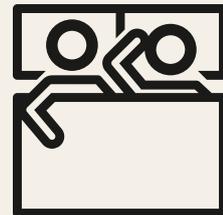

5

Do not remove the tags / labels from the mattress.

They contain useful information on the mattress and the manufacturer, and enhance the guarantee.

6

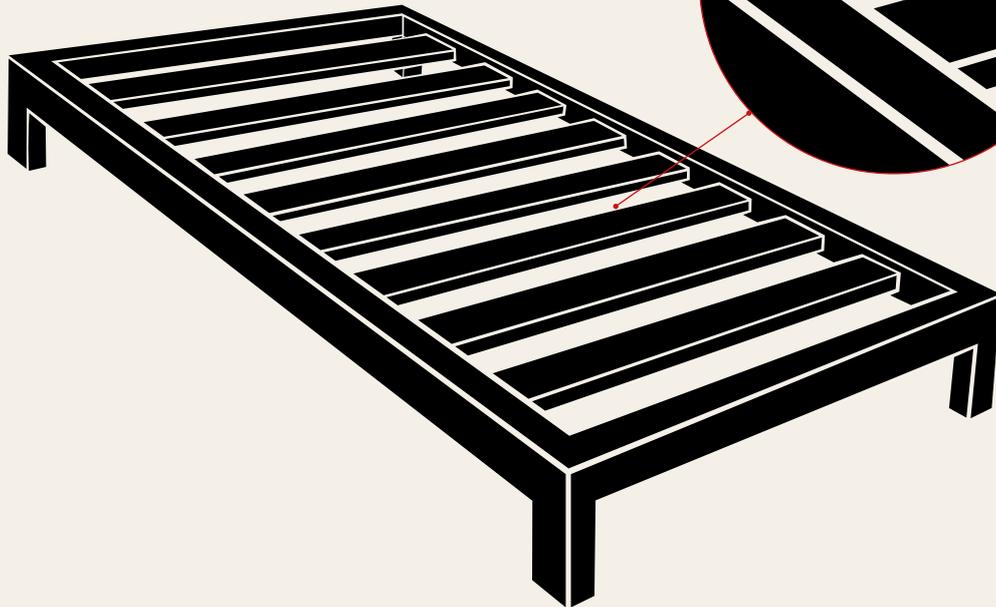

After installing a new mattress, allow yourself some time to get used to it.

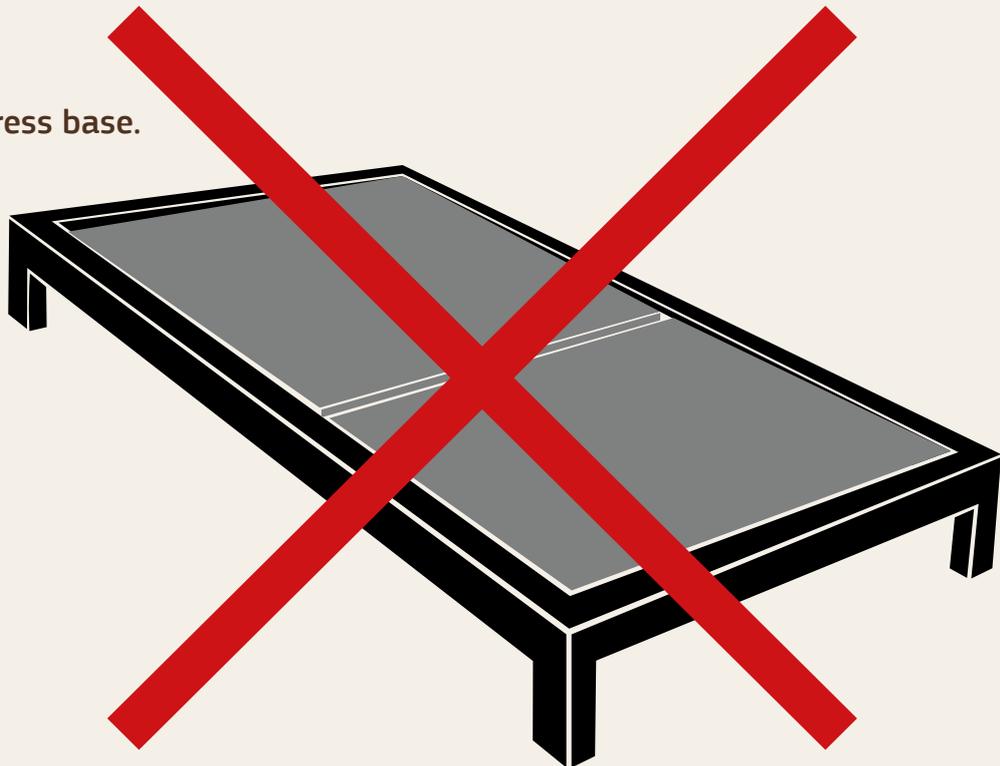

After many years on your old mattress, you must give your body time to adjust and get used to your new handmade mattress.

Caring for your mattress

Simple care and maintenance tips.

1

Do not wash,
do not iron
do not beat
& do not steam clean
(organic cleaning) the mattress.

The only way to clean the
mattress is with a vacuum
cleaner.

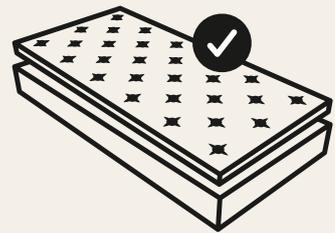

2

Do not stand on the
mattress, do not let
children use it as a
trampoline

and do not place heavy objects on it.

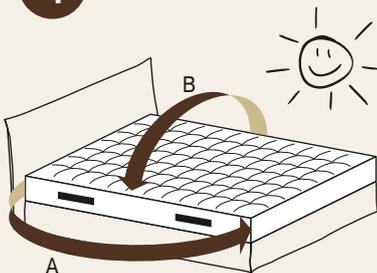

3

Use the Matt-Royal®
mattress protector

to keep your mattress clean and to
ensure maximum yield and a longer
lifespan

4

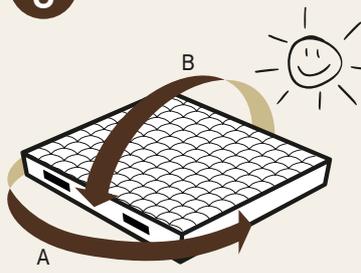

Turning and airing your
mattress

Turn your mattress regularly. In the first
4 months of use, it is recommended that
the mattress be turned every month in a
different direction (alternating between
horizontal and vertical flips and rotations).
After this four-month period, the mattress
must be turned every three months. Also,
every 6 months the mattress must be
placed in a spot that is exposed to the sun.

** Changing side (B), does not apply to one-
sided mattresses.*

5

Turning and airing
equilateral* mattresses

The same processes applying to
standard-sized mattresses apply here,
the only difference being that **the
handles of equilateral mattresses
must ALWAYS be on the side of the
bed.**

**e.g. 2mX2m in size*

**Changing side (B), does not apply to
one-sided mattresses.*
